Tailored Design for Your Beauty

WHY HYAFILIA?

V PHASIC is a highly concentrated hyaluronic acid arrangement & refinement technology that enables HyaFilia to possess only the best values of bi-phasic and mono-phasic fillers. As a result, HyaFilia has superior cohesiveness and elasticity at the same time while also maintaining low injection force.

Safe

Our crosslinking technology using special MACM equipment was designed to reduce minimizing the risk of adverse events. Minimize BDDE residue amount chemically, and strongly combine hyaluronic acid physically.

Cohesive

High cohesion enables the treatment to be performed in the desired shape, resulting in a natural look and preventing migration after the treatment

Long-lasting

Crosslinked HA manufactured with our own specialized technology, has long-lasting effects due to its excellent enzyme resistance to slow decomposition in the body despite a small amount of BDDE.

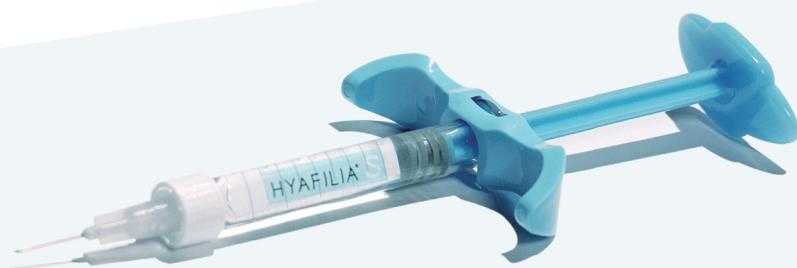

Elastic

Highly elastic HyaFilia can resist an external force that induces it to deform a shape or to lift the skin.

Smooth

Smooth injection allows doctors to control procedures easily and to perform a procedure delicately. Doctors can minimize patients' skin damage, and prevent bruising, erythema, and edema after the procedures.

DESIGN FEATURES

Different Color Design to identify each models

S

Ergonomic Design for doctor's comfort

M

Comfortable Design to decrease injection force

V

HYAFILIA®

S M V

HyaFilia S is an ultra-plastic gel of cross-linked of hyaluronic acid dedicated for implantation in shallow wrinkles and moderate skin defects. It offers balanced tissue restoration without creating a rough and nodular surface. The product is dedicated mainly to correct the glabella, wrinkles around the mouth and eyes, as well as the neck, hands or tear through.
